

10Pearls QA Internship

Assignment 2

Test Plan and Test Cases Submission

Name: Fatima Noor

Domain: Quality Assurance

1. Introduction

Purpose

This Test Plan defines the testing approach for the Online Book Store system. It outlines the scope of testing, testing objectives, test environment, testing types, entry and exit criteria, risks, assumptions, and test deliverables. Testing will be performed based on the functional requirements documented in Assignment 1 to ensure that the core functionalities of the system work as expected.

2. Scope of Testing

In Scope

The following functionalities will be tested:

- User Registration
- User Login and Authentication
- Browse Book Catalog
- Search Books by Title, Author, or Category
- View Book Details
- Add Books to Shopping Cart
- Remove Books from Shopping Cart
- Checkout Process
- Order Confirmation
- User Account Management

Out of Scope

The following areas are not included in this test plan:

- Performance Testing
- Security Testing
- Compatibility Testing
- Database Testing

- Third-party Payment Gateway Validation

3. Testing Objectives

The objectives of testing are to:

1. Verify that users can successfully register and log in to the system.
2. Validate that users can browse, search, and view book details correctly.
3. Ensure users can add and remove books from the shopping cart.
4. Verify that the checkout process and order confirmation work as expected.
5. Confirm that all implemented functionalities meet the functional requirements defined in Assignment 1.
6. Identify and report defects before the application is considered ready for release.

4. Test Environment

Component	Details
Application Under Test	Online Book Store
Operating System	Windows 11
Browser	Google Chrome (Latest Version)
Test Management Tool	Testworthy
Documentation Tool	Microsoft Word
Version Control	GitHub

5. Testing Types

Testing Type	Application in this Project
Smoke Testing	Verify that the critical functionalities, including registration, login, browsing books, searching books, adding books to the cart, and checkout, are working before detailed testing begins.
Regression Testing	Re-test existing functionalities after updates to ensure that previously working features such as login, cart management, and checkout continue to function correctly.
Negative Testing	Verify that the system properly handles invalid inputs, such as incorrect login credentials, empty required fields, invalid search keywords, and checkout with an empty shopping cart.
Automation Candidate	Identify repetitive test cases such as login, search, add to cart, and checkout that can be automated in future testing cycles.

6. Entry Criteria

1. Testing will begin when:
2. Functional requirements are finalized and approved.
3. Test cases have been prepared.
4. The test environment is available.
5. Testworthy project and test suites have been created.

7. Exit Criteria

1. Testing will be considered complete when:
2. All planned test cases have been executed.
3. Test execution results have been updated in Testworthy.
4. Critical defects have been resolved or documented.
5. Test execution reports have been generated.
6. All planned testing activities have been completed.

8. Risks and Assumptions

Risks

1. Testworthy may be temporarily unavailable, affecting test case management and execution.
2. No live Online Book Store application has been provided for test execution.
3. Limited project information may restrict complete test coverage.

Assumptions

1. Testing is based on the functional requirements documented in Assignment 1.
2. The Online Book Store functionalities remain unchanged during testing.
3. Testworthy will be used to manage, execute, and export test cases once it is accessible.

Note: Testworthy is not working. I didn't try it at the last but only have the screenshot to prove that the problem was arising. I have also sent support@testworthy.us the mail. When I successfully created the account, I will add the required file.
